

Category 1:

- Wash fruits and veggies in a tub or pot. Water plants with that water. We use a dash of hydrogen peroxide in the water to remove any microbes - plus it helps with plant growth as well.
- After soaking or cooking beans, use water for plants. Adds nitrogen to the soil.
- Use a Culligan shower filter, which restricts flow and filters out minerals that cause itchy dry skin.
- Change out the toilet fill assembly. The new ones use less water.

Category 2:

- Install a drip watering system with a timer.
- Plant drought resistant and native plants.

Category 3:

- Fill 5 gallon bucket with water and keep in bathtub. Use 1 gallon bucket to flush toilet and 1 gallon bottle to wash hands. And be sure to water plants with any excess. Don't just dump it down the drain.

Category 4:

- Dump old pet water into a watering can to use on plants.
